New Value For Control Panels

Control Panels: The Heart of Manufacturing Sites.

Evolution in control panels results in large evolution in production facilities.

And if control panel design, control panel manufacturing processes, and human interaction with them are innovated, control panel manufacturing becomes simpler and takes a leap forward.

OMRON will continue to achieve a control panel evolution and process innovation through many undertakings starting with the shared Value Design for Panel *1 concept for the specifications of products used in control panels.

*1 Value Design for Panel

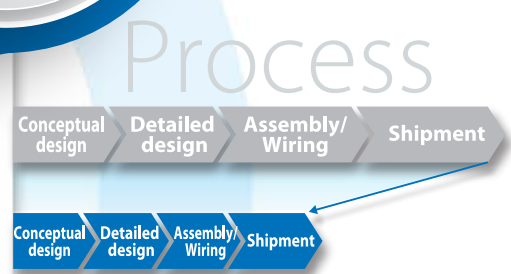

Our shared Value Design for Panel (herein after referred to as "Value Design") concept for the specifications of products used in control panels will create new value to our customer's control panels. Combining multiple products that share the Value Design concept will further increase the value provided to control panels.

Bringing Advances to Control Panels with Labor-saving and Downsizing

Pushbutton with Push-In Plus technology Added to Lineup.

The OMRON Push-In Plus technology of products has now been advanced further with the addition of new Pushbutton Switches to the 22 dia./30 dia. series. These products offer new value through further reductions to the work necessary and a more compact design.

Improved Workability in Wiring and Installation

Rear Insertion Is Used, So the Wiring Part Can Be Checked Directly and Insertion Is Easy

Safety Locked by Sliding One Piece during the Installation

Only one step is required for a safety lock.
Only two steps are required for easy removal.

Push-In Plus technology for Easy Wiring

Just Insert Wires: No Tools Required
 Now you can use Push-In Plus technology to reduce the time and work involved in wiring.

Greatly Reduce Wiring Work with Push-In Plus technology

Screwdriver Held in Place to Free Both Your Hands

Optimized shape to hold the screwdriver was created by the resin parts and the spring. Work goes smoothly when connecting stranded wires directly to the terminal because it's easier to aim at the desired terminal.

Easy to Insert

OMRON's Push-In Plus technology are as easy as inserting to an earphone jack. They help reduce the work load and improve wiring quality.

Held Firmly in Place

Even though less insertion force is required, the wires are held firmly in place. The advanced mechanism design technology and manufacturing technology produced a spring that ensures better workability and reliability.

IEC standard (cable diameter)	Push-In Plus terminal block	Screw terminal block
20 N min. (AWG20, 0.5 mm ²)	125 N	112 N

*Information for Push-In Plus and screw terminal blocks is based on OMRON's actual measurement value data.

No Retightening Required

Tightening screws is necessary for screw terminal blocks, but with Push-In Plus technology, there is no need for retightening. This reduces works for wirings, inspections, delivery (shipping), or maintenance.

Changes to the Wiring Direction and a Shorter Body Provide Freedom in the Layout

The Body Approximately 20% Shorter Than That of the Screw Terminal Block Type for Thinner Control Panels

We have taken every effort to reduce the body length in the design and realized a short body that is in the smallest class* in the industry. This contributes to reductions of the panel thickness.

Lighting Units for Lighted Switches are the Same Size as Contact Blocks

The size of Lighting Units is reduced in the same ways as Contact Blocks.

No Need to Secure Space Above and Below for Wiring

Rear insertion is used to improve the freedom in the design.
